DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Objections

Claims 1-12 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. These claims are directed to an apparatus and do not further limit claim 13, which they depend upon and which is directed to a method.

Claim 1 has been treated as an independent claim below, because although it depends from claim 13, the method does not affect the structure of the fumigation apparatus and is merely a recitation of intended use.

Claim Rejections - 35 USC § 102

Claims 1-4, 7-9, 11 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Smithyman, U.S. Patent 6,047,497, for the reasons set forth in the previous Office Action.

Claim Rejections - 35 USC § 103

Claims 13, 14, 16-18 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smithyman, as applied in the previous Office Action. Smithyman teaches a continuous

recycle of fumigant, which Applicant interprets to mean the extraction of the fumigant is not delayed until after the fumigation interval. However, as with the claimed method, Smithyman provides for exposure to fumigant during the entire fumigation interval and ceases exposure only after the fumigation interval is complete. Therefore, it is not seen how the claimed step is anything other than an obvious alternative since the same effect is achieved.

Claims 5, 6, 10, 15 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smithyman in view of Blatchford, Australian Patent 32801/95, for the reasons set forth in the previous Office Action.

Response to Arguments

Applicant's arguments filed July 18, 2005 have been fully considered but they are not persuasive.

Applicant's arguments concerning the apparatus claims, it is once again noted that any process limitation found therein are given no patentable weight as they are considered to merely embody an intended use.

Applicant argues that Smithyman does not disclose sealing off the fumigant in the chamber. However, such a limitation is neither disclosed nor claimed by Applicant. Additionally, Smithyman discloses a valve (64) for controlling flow of the fumigant, as discussed in the previous Office Actions.

Applicant also argues that Smithyman does not teach delaying extraction of the fumigant until after the fumigation interval and that the claimed method does not require continuous recycling. However, as with the claimed method, Smithyman provides for exposure to fumigant

during the entire fumigation interval and ceases exposure only after the fumigation interval is complete. Therefore, it is not seen how the claimed step is anything other than an obvious alternative since the same effect is achieved.
